Advanced manufacturing processes have come together to produce a true classic. A long, straight weatherboard with clean lines will complete any house or entertainment area.

The Classic Weatherboard is engineered to be defect free, and treated with an organic preservation system to create a durable cladding solution.

#### BENEFITS OF BEING A CLASSIC

- Timber Product
- Two sizes, long length
- Rebated for easy installation
- Plantation Grown Timber
- Low Embodied Energy
- Organic Preservation System
- Genuine primer used
- Guaranteed

#### CONFIDENCE

The Classic Weatherboard joins the Design Pine® family of quality products giving home owners confidence in their cladding selection. The time proven methods of manufacture involved in Design Pine® stand out against other cladding options.

All boards are blast treated with an intense heat prior to finishing bringing any resin pockets to the surface. This unique process was developed to reduce the risk of resin bleed over the life of the products.

## EASY INSTALLATION

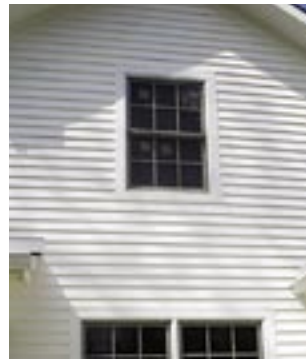

Manufactured from plantation grown radiata, the Classic weatherboard is easy to cut and handle and is available in lengths up to 7.2m. Each board has a rebate on the back allowing the installer to space each one perfectly, avoiding any special systems or brackets, making the Classic weatherboard quick and easy to install.

Design Pine® Classic weatherboards are pre finished with a genuine primer which means finishing a project is as simple as applying the two topcoats. Timber is a natural material and thus the use of light-coloured topcoats is recommended.

## DURABLE WEATHERBOARDS

All Classic Weatherboards are defect free. The removal of natural defects will aid dimensional stability of the weatherboards for the life of the house.

The Organic Preservation System is durable in all weather conditions and repels insect attack. This unique preservation system aids dimensional stability as the increased volume of waxes and resin prevents moisture ingress.

with clean lines, and durability that will last a lifetime

## ECO INTEGRITY ASSURED

This mark symbolises ITI's commitment to offering wood products of the highest quality. It represents our systematic approach to always producing a superbly engineered product with minimal cost to the environment.

## STORED CARBON

Radiata pine is one of the truly renewable resources available for use in today's construction industry. All Design Pine wood fibre is drawn from plantation grown forest with some plantations 3rd generation. These plantations are a carbon sink as trees absorb greenhouse gasses (including CO<sub>2</sub>) while they grow and release oxygen back into the atmosphere keeping the planet in balance.

Another great environmental benefit is the low amount of energy required to harvest and process timber compared to other building materials, this is shown in the table below.

	TIMBER	STEEL	CONCRETE	ALUMINIUM
Fossil fuel energy used in production (ML/m <sup>3</sup> )	750	266,000	4,800	1,100,000
Carbon released (kg/m <sup>3</sup> )	15	5320	120	22,000
Carbon stored (kg/m <sup>3</sup> )	250	0	0	0

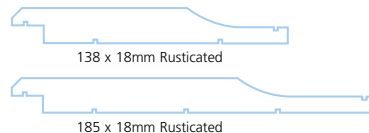

## THE DESIGN PINE CLADDING FAMILY

The classic weatherboard is the new addition to a range of defect free cladding options offered under the Design Pine brand. Like the other members of the cladding family the classic weatherboard comes in long lengths up to 72m is easy to install and offers peace of mind with its 25 year preservative guarantee.

Other products to consider in your design:

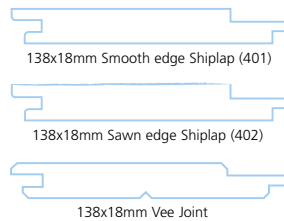

### Rusticated Weatherboard

Lengths: 5.4, 6.0, 7.2m  
 Pieces per pack: 185 x 18mm 56 pcs  
 138 x 18mm 70 pcs

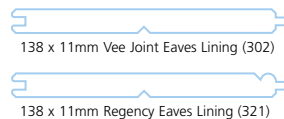

### Shiplap

Lengths: 5.4, 6.0m  
 Pieces per pack: 70 pcs

### Lining boards

Lengths: 5.4m  
 Pieces per pack: 105 pcs
